EXPERIENCE

Senior Software Engineer - Data Platform

April 2026 – Present

CVS Health

New York, NY

- Designed and built a Python SDK that replaces manual, one-off integrations with a reusable, configuration-driven system that auto-generates BigQuery jobs to source, transform, and deliver data payloads to vendor APIs.
- Built automated configuration and validation layers for pipeline generation using a multi-agent system on Google ADK, cutting build time by 60% while reducing operational errors.

Software Engineer - Data Platform

January 2024 – March 2026

CVS Health

New York, NY

- Developed a full-stack self-service system using React, FastAPI, and Apache Airflow to trigger large-scale data generation and experimentation workflows.
- Implemented event-driven orchestration services using cloud messaging and Apache Airflow, reducing manual job setup by 80% while improving workflow reliability.
- Designed and implemented modular, reusable components on GCP to standardize code across pipelines, enabling shared functionality and improving maintainability of backend systems.
- Partnered cross-functionally with product and ML teams to deliver pipelines using BigQuery and Spark-based ML models, supporting experimentation with \$15M+ potential medical cost savings.
- Implemented a Cloud Spanner change stream to BigQuery pipeline using a GCP Dataflow template, enabling near-real-time data ingestion for analytics.

Machine Learning Engineering Intern

May 2023 – August 2023

CVS Health

- Built a Python library to manage experiment execution and metadata tracking on GCP Vertex AI, leveraging BigQuery for scalable storage, enabling reproducible batch workflows across multiple ML pipelines.
- Integrated the library into production batch pipelines, reducing setup time by 60% and improving reproducibility.

Software Engineer

August 2020 – July 2022

Fidelity Investments

- Built high-throughput Java Spring Boot APIs supporting 300K users and 1M+ documents, with a strong emphasis on testing and code quality.
- Spearheaded the integration of ML models using FastAPI, cutting document processing delays by 6 hours.
- Led 6 interns in delivering a multi-tenant onboarding platform, performing code reviews and feature delivery.
- Designed AWS event-driven pipelines with SNS, SQS, and Lambdas, enabling reliable backend processes.

Software Engineering Intern

May 2019 – July 2019

Fidelity Investments

- Implemented automated user addition functionality using Java Spring Boot backend and React frontend.
- Shipped feature on AWS using CI/CD pipelines, reducing manual effort by approximately 12 hours for developers.

PROJECTS

Atelier — Sketch to Sewing Pattern | *FastAPI, LangGraph, Python, Docker*

April 2026 – June 2026

- Built a multi-agent AI system that converts fashion sketches or garment photos into complete, printable sewing patterns with step-by-step instructions.
- Designed a LangGraph pipeline coordinating four specialized Claude agents (vision, measurement, pattern, instructions) with clean, typed handoffs via Pydantic models.
- Containerized with Docker and exposed via FastAPI with PDF generation using ReportLab.

Real-time Movie Recommender | *Flask, Kafka, Docker, Jenkins, Prometheus, SQL*

January 2023 – April 2023

- Built a low-latency backend recommendation service with Flask and Kafka for real-time movie suggestions.
- Implemented model inference pipelines and optimized system performance for fast response times.
- Designed a Docker-based CI/CD deployment pipeline with Jenkins, monitored with Prometheus/Grafana, thereby achieving >99% uptime and robust production reliability.

Language Detector/Translator App | *Java, Docker, MongoDB, Cloud*

January 2023 – April 2023

- Built an Android app for language detection and translation with a backend REST API.
- Deployed a RESTful web service on GitHub Codespaces cloud using Docker.
- Integrated MongoDB logs for operational analytics to optimize performance.

TECHNICAL SKILLS & ACHIEVEMENTS

Languages: Java, Python, SQL, Bash
Frameworks: Spring Boot, React, FastAPI, Django, Flask, JUnit, pytest
Developer Tools: Google Cloud Platform, Amazon Web Services, Docker, Terraform, Apache Airflow, Kafka, Jenkins, Git | SQL (PostgreSQL, MySQL), NoSQL (MongoDB, DynamoDB)
Certifications: GCP Certified Professional Cloud Developer (2024), AWS Certified Developer - Associate (2021)
Patents: Automated prediction of computing resource performance scaling using reinforcement learning-US11775352B1

EDUCATION

Carnegie Mellon University	Pittsburgh, PA
<i>Master of Information Systems Management</i>	<i>August 2022 – December 2023</i>
• Graduated with Highest Distinction, Dean’s List, CGPA: 3.87 • Relevant Coursework: Distributed Systems, ML in Production, Machine Learning, NoSQL Database Management • Graduate Teaching Assistant: Distributed Systems
